

What TYPE K DAMPER DRIVES is Offering:

1. Custom Designed Applications:

TYPE K Custom Retrofit Drives are designed for each application and in most cases no additional engineering or field fabrication is required. A field survey will be coordinated with plant personnel to determine dimensions and details after receipt of the purchase order.

2. Drop-in-Place Design (Pedestal Drive Only):

The TYPE K Damper Drive pedestal mount will have the exact mounting footprint and output shaft location (X-Y-Z axis) relative to the existing drive dimensions for ease of installation. The existing connecting rod linkage and clevis or spherical rod ends will be inspected and typically reused. In some cases, an optional direct mount to the damper is available. Feedback from customers indicates that TYPE K Drives can easily be installed in a few hours using standard hand tools.

3. Direct Mount Design:

The TYPE K Drives can easily be direct mounted on many styles of damper and quarter-turn valve shafts.

4. Auto-CAD Drawings:

Approval drawings are available upon request. Final drawings are enclosed in the Installation, Operation and Maintenance (IOM) manual with shipment. CD IOMs available on request.

5. Installation, Supervision & Training:

Upon request, a factory technician can be available for one day's supervision of start-up and training.

6. Outstanding Warranty:

Warranty covers performance and defects in materials and workmanship for a period of three (3) years or two (2) million operations, whichever ever occurs first after date of shipment. Proper air quality, air pressure and ambient temperature must be in specification for warranty to apply.

7. Our Experience:

At TYPE K DAMPER DRIVES, we have been building damper drives for over twenty years. Our user list reads like a "Who's Who List" of the Utility Power Industry. References by application are available on request.

8. Local Representation:

_____ is your factory trained representative.

9. Constructions and Testing:

All TYPE K Drives are calibrated and cycle tested prior to shipment. All TYPE K Drives are shipped fully assembled ready for installation and operation.
