

JR Product Information

DESIGN: The TYPE K JR Drive is specifically designed as a replacement for an existing Jordan electric actuator.

The TYPE K JR Drive is a 4" bore or 5" bore, 6", 12" or 18" stroke linear cylinder drive with standard components including the DPC-777 position controller. The only option is a combo air filter, suggested for use with every four (4) to six (6) DPC-777 controllers. The combo filter is required for the TYPE K three (3) year warranty.

Any variations to the product as described on the JR Ordering Code sheet or dimensional drawings becomes a custom design and must be quoted as Series LX Cylinder damper drive. Placing a linear drive where no drive has been used before (manual operation) must also be quoted as a Series LX Cylinder drive.

Component and dimension changes must be quoted as custom engineered Series LX Cylinder product. Please contact TYPE K Sales for more information.
